Please Retain these Instructions for Future Reference

Installation

The overall size of the wall cabinet is 250(W)mm*222(D)mm*1391(H)mm (includes the top and bottom brackets)

It should be fixed using the 2 wall brackets provided.

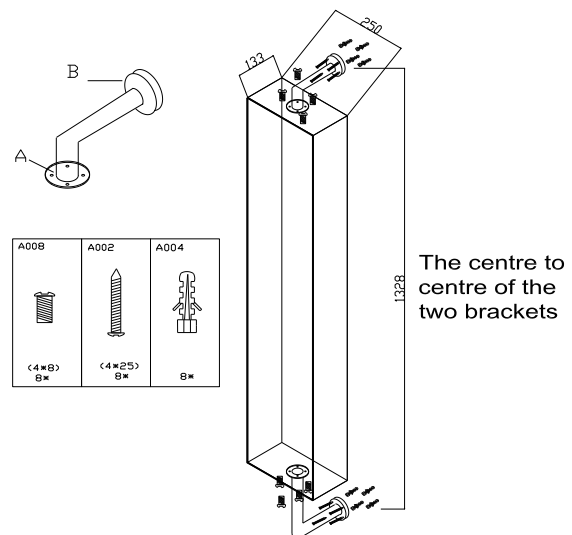

Determine the position of the cabinet & mark the fixing holes.

- 1) Fit the wall brackets to the wall using a plumb line to ensure that they are correctly aligned. Then slide the covers into place.
- 2) Position the cabinet between the two brackets and fix using screws A008.

Note:

To ensure safe use please regularly check that the fixing screws are secure.

Wall plugs & screws provided are only suitable for stone, brick or generally solid walls. For plasterboard, particleboard and hollow walls it will generally be necessary to use alternative specialist fixings available from all good DIY stores. Ensure the wall on which the cabinet is to be mounted is of sufficient strength. If in doubt seek specialist advice.

General Safety Note: Take care when using power tools in the bathroom. The use of an RCD (Residual Current Device) is recommended. Always wear eye protection when drilling. Beware of hidden cables or pipe runs.

Warnings

1. Do not place flammable or corrosive items against or in close proximity to the cabinet
2. Do not immerse the cabinet into water.
3. Please ensure cabinet is securely fixed to the wall using the guidelines already outlined above
